

David Adeyemo

1. Allow a user to enter a quantity of an item. If the quantity is greater than or equal to 1000, the unit price should be \$3.00. For quantities under 1000, the unit price is \$5.00. Compute extended price to quantity x unit price. Compute tax to be 7% of the extended price. The total is computed as extended price plus the tax. Display the quantity, unit price, extended price, tax, and total.

Input	Process	Output
enterquantity	If (	Quantity:
extendedprice	extendedprice= quantity * unit price	Unit price:
Tax = 0.07	Total amount = extended + tax	Extended price:
Total		Tax:
		Total amount:

2. The program asks the user for an item and quantity. Determine the unit price of the item based on the chart below. Compute the extended price to quantity x unit price. Display the item, unit price, and extended price.

Item Unit Price

A \$10.00

B \$20.00

Input	Process	Output
item		
quantity	extendedprice = quantity * unitprice	Item
unit price		unitprice
extendedprice		extendedprice

3. Enter the number of books to order and cost per book. If the order total is over \$50.00 shipping is free. If the order total is \$50.00 or under charge, \$25 shipping. Display the order total and shipping charge (note 0 should display for a free shipping charge).

Input	Process	Output
numbooks		
cbooks	Numbooks * cbooks = total	Order total:
total	total + 0	Shipping charge:
Ship = 25.00	total + 25	

4. The warrantee of an appliance depends on the cost of the appliance. For appliances over \$1,000, the warrantee cost is 10% of the price. For appliances \$1,000 or less, the warrantee cost is 5% of the price. The user will enter the name and cost of an appliance. Display name and cost of appliance, the cost of the warrantee and the total (cost of the appliance + warranty).

Input war	Process	Output
A cost		A name
Warrantee cost	Total = A cost + warranty	A cost
A name		Warrantee cost
		Total

5. Enter the user's last name, number of dependents, and gross income. Compute adjusted gross income to be gross income minus dependents at times \$12000. Next determine an income tax rate. Adjusted gross incomes over \$50,000 have a tax rate of 20%. Adjusted gross incomes of \$50,000 are under a tax rate of 10%. Once you determine the tax rate, compute income tax to be adjusted to the gross income times tax rate. If the income tax is less than 0, set the income tax to \$100. Display last name, gross income, number of dependents, adjusted gross income, and income tax.

Input	Process	Output
-------	---------	--------

lastname		Name:
dependents	Adjustedgrossincome = gross income - (dependents * 12000.00)	Gross income:
grossincome		Dependents:
adjustedgrossincome		Adjusted gross income:
		Income tax:
